Additional info

- **Long format with mixed units.** One `value` column holds percentages, US dollars, growth rates and years. .
- **Manufacturing is part of industry.** For Portugal in 2020, industry is 19.4% of GDP, of which manufacturing is 12.1%. Adding them would count manufacturing twice.
- **No manufacturing employment.** There is no SL series for manufacturing, so `employment_pct` stays empty for that sector.
- **Irish GDP is distorted.** Multinational profits inflate GDP, so GNI per capita is the better income comparison for Ireland.
- **Current-dollar series.** `.CD` values mix inflation and exchange-rate changes, so they are not comparable over time, use shares and real growth for trends.
- **EU aggregate.** EUU exists here and in the events file but not in Maddison.
